

- All of these models are built by me in blender software.
- 
- All the images used for texture are taken from NASA which is available for public use.
- 
- I have mentioned all of these in my video but I think the audio is not clear for that I am making this word note.
- 
- So basically about the project.
- 
- I have made a virtual solar system in a chronological order.
- 
- Starting with Sun till Neptune I have tried doing it on AR app
- 
- you will see there is a button above that says click me , so basically if we click it it changes the model or the planet to next nearest planet
- 
- so it will start from sun , mercury , venus , earth , mars, jupiter, saturn and so on
- 
- The text you will see is also dynamically changed with JS IT IS NOT A VIDEO EDITING
- 
- So basically once we are finished looking at 9 planets the JS script will take us to the SUN to start from.
